DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected on the ground of nonstatutory double patenting over claims 1-38 of U. S. Patent No. 6,583,799 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: generating a thumbnail associated with the image when the image is associated with the area; partitioning the image into one or more fragments; and uploading each fragment to the remote computer.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application

Art Unit: 2173

which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sutcliffe et al. (US Patent No. 6,253,216) in view of Hoffert et al. (US Patent No. 6,374,260).

Regarding claims 1 and 10, Sutcliffe discloses a computer-implemented method for uploading image data to a remote computer comprising defining an area in a user interface adapted to receive an image (see col. 6, lines 6-67); partitioning the image into one or more fragments (see col. 9, lines 9-43); and uploading each fragment to the remote computer (see

Page 4

figures 3-4); however, Sutcliffe fails to explicitly teach generating a thumbnail associated with the image when the image is associated with the area.

Hoffert teaches generating a thumbnail associated with the image when the image is associated with the area (see col. 10, lines 1-65). It would have been obvious to one of an ordinary skill in the art, having the teaching of Sutcliffe and Hoffert at the time the invention was made, to modify uploading each fragment to the remote computer to authorized others to view the personal page of Sutcliffe to include generating a thumbnail associated with the image when the image is associated with the area, as taught by Hoffert. One would have been motivated to make such a combination in order to enable user a preview image before selecting or uploading partitioning image to the remote computer.

Regarding claims 2 and 11, Sutcliffe discloses determining whether a fragment upload was successful (see col. 6, lines 6-54).

Regarding claims 3 and 12, Sutcliffe discloses further comprising generating a message if one or more fragment uploads had failed (see col. 9, lines 43-63).

Regarding claims 4 and 13, Sutcliffe discloses further comprising retrying the uploading step if the fragment upload failed. (see col. 10, lines 15-62).

Regarding claims 5 and 14, Hoffert wherein the message relates to one or more of the following: the name of the file, the number of fragments received, the number of outstanding fragments, the location of the file, and instructions on finishing the upload (see col. 7, lines 54-65 and col. 8, lines 1-33).

Regarding claims 6 and 15, Hoffert discloses wherein generating the thumbnail further comprises decompressing the image file (see col. 4, lines 18-67).

Art Unit: 2173

Regarding claim 7, Hoffert discloses wherein generating the thumbnail further comprises loading the local thumbnail into a browser for viewing (see col. 10, lines 18-56).

Regarding claims 8 and 9, Hoffert discloses further comprising generating metadata associated with each fragment (see col. 11, lines 5-21).

As per claims 16-20 are apparatus claims that corresponds to method claims 1-15, and thus are rejected for the aforementioned reason.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (PTO-892).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cao (Kevin) Nguyen whose telephone number is (571)272-4053. The examiner can normally be reached on 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cabeca can be reached on (571)272-4048. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
